INTERSTATE COMMERCE COMMISSION,
BUREAU OF STATISTICS AND ACCOUNTS,
Washington, D. C., September 15, 1909.

To the honorable members of the Interstate Commerce Commission:

SIRS: I have the honor to submit this, the Twenty-first Annual Report on the Statistics of Railways in the United States, being the report for the year ending June 30, 1908.

UNIFORM SYSTEM OF ACCOUNTING.

In the report for the previous year will be found an account of the development of a uniform system of accounting for transportation agencies subject to the jurisdiction of the Commission, so far as it was at that time developed. To the classifications and accounting rules there described there have been added during the year covered by this report the Classification of Expenditures for Additions and Betterments and the Form of General Balance Sheet Statement, as prescribed by the Interstate Commerce Commission for Steam Roads, effective on July 1, 1909. The general structure of the accounting system is now completed.

The further development of that system concerns itself with a uniform system of shop accounts, a uniform classification of employees, uniform rules for computing average daily compensation of employees, a uniform classification of commodities carried as freight, and similar problems which, now that the main classifications are completed, may be undertaken. The development of satisfactory rules for the assignment of revenues and expenses to States, a task urged by the National Association of Railway Commissioners, is another problem which presses for solution. In this connection, also, should be mentioned provision for more perfect statistics of transportation services rendered at terminals and stations. All railway statistics without exception, as well as the theory of railway tariffs which many countries aim to realize, call for a separation of terminal

and train expenses. One step has been taken for working out the problem thus suggested, but much remains to be done. It is mentioned in this connection as indicating the further development of the system of statistics and accounts which the results already accomplished make possible.

A word of explanation relative to the Form of General Balance Sheet Statement promulgated by the Commission may not be inappropriate. The chief difficulty in drafting a satisfactory balance-sheet statement arises from the different, and to some extent conflicting, interests concerned, which, for the sake of explicit statement, may be defined as—

(*a*) The interest of the management;
(*b*) The interest of the investor, and
(*c*) The interest of the public.

The chief aim of those who administer the property is to maintain the credit of the business placed in their hands. It is therefore the purpose of the management to develop the property without a corresponding increase in outstanding securities. This is true for the reason that the wider the margin between the value of the property to which the corporation has title and the amount of securities outstanding against the property, the stronger will be the credit of the company and the greater its ability to borrow fresh capital in time of need. This is the explanation of what has been termed the "American system of railway financiering," which, during the last thirty years, has led to enormous expenditures for new construction and for additions and betterments, without corresponding charges to the property accounts. It is also doubtless an explanation of the fact that those who manage American railways have seldom thought it wise to set up in the property accounts, through current or periodic inventories, the results of changes in the valuation of real estate or of fluctuations in the market values of material and labor. It thus becomes evident why the measurement of "cost of property" acceptable to the management is not the money expended in the construction or the development of the property of the corporation, but the securities which must be issued in order to obtain the necessary funds for construction and development; and, as long as balance sheets are constructed with exclusive regard to the interest of the management, it will not be possible to read from them the investment cost of the property.

The interest of the stockholder, on the one hand, so far as the accounting record of charges to property accounts is concerned, is at variance with that of the management. It is, of course, true that the trustees of the property—that is to say, the board of directors and the officials who represent them—may also be stockholders, and much of the "high finance" of recent years has resulted from the temporary substitution by the management of the stockholder's

interest for the legitimate interest of the management. The stockholder is the residuary proprietor of all of the company's assets not covered by outstanding obligations, and it is to his interest that the value of the property should be increased without a corresponding increase in the number of shares which have a proprietary claim upon the property. This is true for the reason that the value of the shares will increase, other things being equal, with the increase of the property which they represent, and in a properly constructed balance sheet a stockholder should be able to reach the true book value of his property, and to deduce from it the basal market value of each share. The stockholder's interest is expressed in valuation. His interest in the business is that of an investor, and he desires to apply the rules and principles of commercial valuation to his investments. He desires also to have as high a statement of the property accounts as the commercial conditions of the business warrant, in order that he may protect the value of his investment by showing how great is the value of the property used in rendering the service for which the public pays. There is a marked tendency in recent years toward the commercial valuation of railway properties for the purpose of making use of that valuation to resist a reduction in passenger or freight rates, and it is consequently of great importance to the stockholder that uniform and reasonable rules should be followed in arriving at a practicable, usable, and equitable statement of the property accounts.

The interest of the public, which is the third interest involved in the property accounts of railways, rests upon the fact that a reasonable rate for transportation services is a rate which contributes a reasonable return upon necessary investments, and a satisfactory balance sheet from the public point of view is one which shows what has been actually invested in the property. The public therefore has the right to demand that the property ledger should record every item of property which an appraiser would find, should an appraisement be undertaken, and from the point of view of the public at least, the figures entered on the property ledger against the several items of property there recorded should be the amount of money actually spent in creating the property rather than, as the management desires, the amount of securities issued, or, as the stockholder desires, the commercial valuation of the property.

The Form of General Balance Sheet Statement submitted to the Commission and promulgated under an order of June 21, 1909, was constructed, primarily, under the influence of the third interest above described. The chief aim of this statement is to record such an analysis of assets and liabilities as will result in a complete statement of the situation. Investment value, rather than securities issued or commercial valuation, is made the corner stone of this state-

ment, and provided the records of the carriers can be adjusted to this conception, there will be found in the balance sheet a figure which may be accepted as a starting point for computing the amount which the public may be called upon to contribute in passenger and freight rates. This also is the conception which should underlie a valuation of railway property were Congress to authorize such a valuation. With the above general explanation, the present report may be excused from a consideration of the many detailed questions which arose in connection with the Classification of Expenditures for Additions and Betterments and the Form of General Balance Sheet Statement. All such questions were decided in harmony with the fundamental principle laid down.

CHANGES IN FORM OF STATISTICAL REPORT.

In order that a proper interpretation may be made of the summaries and tables which follow, and particularly in the matter of comparative use of the figures submitted in this report with those published in previous statistical reports, attention is called to the fact that the work incident to the compilation of data for the year 1908 has included:

I. A separation of returns for terminal and switching properties.

II. An extension and rearrangement of the income-account statement.

III. Separate compilations of operating expenses for large roads, for small roads, and for systems.

IV. The presentation of various statistical averages and ratios in a single table.

1. *Terminal and switching properties.*—The switching and terminal service rendered by carriers differs, in many respects, from that rendered in the direct transportation of passengers and freight. The existence of independent corporate organizations for the rendering of such service also suggests the importance of a separate treatment of that class of properties. One step has been taken toward the complete separation, so far as statistical compilations are concerned, of the service rendered at terminals and the service rendered on the line by requiring a separate form of report for switching and terminal companies independently organized. The main feature of that form consists in the acceptance of the car, rather than the ton-mile, as the unit of service. This corresponds to the facts of operation and management, as also to the tariffs filed covering switching service.

Financial and operating returns for 151 companies of this class for which annual reports were rendered to the Commission for the previous year are not correspondingly represented in this report for 1908. Inasmuch as the present report covers the period of transition so far as switching and terminal companies are concerned, especial care has been taken in the footnotes appended to the several

tables, as also in the summaries contained in the text, to make clear whether returns for switching and terminal companies have been included or excluded.

A list of switching and terminal companies, with their mileage, will be found in Appendix A, page 133. It must not be understood, however, that this list covers all switching and terminal companies, as there are, doubtless, a considerable number to be added.

2. *The extended income account.*—The income account contained in the form for annual report for railway companies for the year ending June 30, 1908, was drawn in conformity with the classification of operating revenues and of operating expenses promulgated by the Commission under its accounting orders of June 3, 1907, and was further influenced by certain accounting principles that underlie the general system of accounts approved by the Commission. Many items which heretofore have been consolidated are now analyzed, and certain items heretofore included in operating expenses are now made income charges. Additional provision has been made for the checking of debit and credit entries arising on account of the contracts between individual corporations brought together into a single system for the purpose of operation.

The usefulness of the statistical reports heretofore published by the Commission has been in some degree impaired by the fact that one could not find a complete income statement for a particular road in a single table. This limitation has now been overcome. Table III in the body of this report shows an income account and a profit and loss account for each road. It is divided into two parts, covering—

(*a*) Operating roads.

(*b*) Leased roads (not operating).

Each of the divisions of this table shows the net corporate income and the manner in which it is obtained, and also the credit or the debit balance carried to the balance sheet. The important point is, that the table as now arranged covers a complete income statement adjusted to the classifications and accounting rules promulgated by the Commission and, consequently, drawn in such a way as to enable it to be checked against the books and accounts of the reporting companies. This, at least, is the purpose held in view.

3. *Operating-expense statements.*—A third significant change reflected in the present report arises from the fact that separate classifications of operating expenses have been prescribed for large roads and for small roads. Large roads are those that operate a mileage in excess of 250 miles, or have annual operating revenues of more than $1,000,000. Included in this class, however, are small roads not independent of the control of large roads as here defined. Small roads are those that operate a mileage of 250 miles or less and have annual operating revenues not in excess of $1,000,000.

The Classification of Operating Expenses for large roads provides for 123 primary accounts, while for small roads only 53 primary accounts are required. In Table V there will be found a statement of operating expenses for all carriers covered by this report, classified under the five general accounts, namely: Maintenance of way and structures, Maintenance of equipment, Traffic expenses, Transportation expenses, and General expenses. In the text will be found two summaries showing the operating expenses of large and of small roads, assembled in harmony with the classifications prescribed for each. Appendix B, page 163, shows the relation between the classification of operating expenses for large roads and that for small roads, which will enable one to combine the two summaries above referred to according to the classification of primary accounts provided for small roads, should one for any reason desire to make such a combination.

The summaries of operating expenses above described do not permit comparison by primary accounts between different roads, a comparison which, provided it can be made, is full of promise for increased economy and efficiency of operation. As a step in the direction of supplying the basis for such a comparative study, there will be found in Appendix C, page 167, a statement showing by operating systems the operating expenses under the extended classification provided for large roads. Information relative to this subject is given in the explanatory note following the title-page of the appendix.

4. *Table of averages.*—Another feature of the present report which differs from all previous statistical publications issued by the Commission, is found in the fact that most of the statistical averages which heretofore have been scattered through the various summaries and tables, are, in the present report, assembled and published in a series of statements. In Table VIII will be found the following averages and assignments:

Average receipts per passenger per mile.
Average receipts per ton per mile.
Average amount received from each passenger.
Average amount received for each ton of freight.
Average journey per passenger.
Average haul per ton.
Passenger service train revenue per train mile.
Freight revenue per train mile.
Operating revenues per train mile.
Operating expenses per train mile.
Average number of passengers per train mile.
Average number of tons of freight per train mile.
Passenger service train revenue per mile of road.
Freight revenue per mile of road.
Operating revenues per mile of road.

Operating expenses per mile of road.
Net operating revenue (or deficit) per mile of road.
Number of passengers carried one mile per mile of road.
Number of tons carried one mile per mile of road.
Ratio of operating expenses to operating revenues.

MONTHLY REPORTS OF REVENUES AND EXPENSES OF STEAM ROADS AND EXPRESS COMPANIES.

Under the provisions of section 20 of the act to regulate commerce, steam roads and express companies subject to the jurisdiction of the Commission are now required to file monthly reports of their revenues and expenses. These monthly statements are regarded as public records. They are rendered in duplicate, one copy being reserved for the use of the Division of Compilation, while the other is immediately filed in convenient form for public inspection. The use made of these returns by the representatives of the press, and by brokers, bankers, and students, indicates that they are serving a useful purpose. The first publication compiled from these monthly reports covers returns of steam roads for the nine months ending March 31, 1909. It is made comparative with the corresponding months of the previous year. Since March a corresponding publication has appeared for every month, and now that the organization of the Division of Compilation has been perfected, it is proposed to publish a monthly report of revenues and expenses within sixty days of the close of the month to which the figures pertain, one-half of this period being allowed to the carriers before their monthly reports are mailed, and the remaining part being used for the compilation and publication of the bulletins based on them. It is further proposed to present in an annual bulletin, not only a substantial summarization of significant facts given in the preceding monthly bulletins, but also detailed returns, by roads, not previously included in other bulletins.

STATISTICAL TABLES.

Following the text will be found nine tables, which comprise the body of the report. The titles of these tables are as follows:

Table I. Classification of Railways and Mileage for the Year ending June 30, 1908.

Table II. Amount of Railway Capital at the Close of the Year ending June 30, 1908.

Table III. Condensed Income Account and Disposition of Net Corporate Income for the Year ending June 30, 1908:

A.—Operating Roads.

B.—Leased Roads.

Table IV. Analysis of Operating Revenues for the Year ending June 30, 1908.

Table V. Analysis of Operating Expenses for the Year ending June 30, 1908.

Table VI. Analysis of Income for the Year ending June 30, 1908.

Table VII. Analysis of Deductions from Gross Corporate Income for the Year ending June 30, 1908.

Table VIII. Showing Certain Traffic Averages and Ratios for the Year ending June 30, 1908.

Table IX. General Balance Sheet for the Year ending June 30, 1908.

A list of the subjects to which summaries in the text of this report pertain will be found in the Table of Contents.

Facing the title-page will be found a map showing the boundaries of the ten groups into which the country is divided for the purpose of a territorial classification of statistical data.

RECEIVERSHIPS.

On June 30, 1908, 9,529.03 miles of line were operated under receiverships, being an increase, as compared with the previous year, of 5,602.72 miles. Twenty-six roads, operating 7,491.30 miles, and two roads, owning 11.50 miles, not operated, have been added to the list of receiverships during the past year; while four roads, operating 2,067.56 miles, and one, owning 2.14 miles, not operated, have passed out of the hands of receivers. In the list of roads placed in the hands of receivers since the date of the last report are quite a number of important roads, including the Western Maryland Railroad, with an operated mileage of 543 miles; the Wheeling and Lake Erie Railroad, which, together with the Wabash Pittsburgh Terminal Railway and the West Side Belt Railroad, operated 593.28 miles; the Seaboard Air Line Railway, which, together with its subsidiary lines, operated 2,997.75 miles; the Chicago Great Western Railway, operating 818.36 miles; and the International and Great Northern Railroad, operating 1,159.50 miles.

MILEAGE.

The data relative to railway mileage in the United States for the year covered by this report are shown in four summaries. These summaries are:

1. Railway Mileage, by States and Territories.
2. Railway Mileage, by Groups.
3. Railway Mileage, by Groups, showing Length of all Tracks.
4. Classification of Mileage according to Organization for Operation, by Groups.

The first and the second of the above summaries refer to what is technically known as "owned" mileage; that is to say, they are compiled from figures taken from the engineers' records of single-track mileage. In case two or more carriers operate over the same track, the mileage of the track so used jointly is represented but once in those two summaries. In case of joint ownership as well as joint use of a piece of track, each joint owner is credited with its proportion of the track, thus avoiding duplication in arriving at the aggregate length of physical mileage. It is important that this explanation be held in mind in order to understand what otherwise might appear to be a discrepancy in the totals found in the first and second summaries when compared with the figures contained in the third summary, which pertain to operated mileage rather than to physical mileage.

[2] Decrease.

[3] Excludes mileage in Alaska (185.39 miles, unofficial), and Hawaii (147.76 miles).

[4] On basis of 2,970,038 square miles, which covers "land surface" only and excludes Alaska and Hawaii.

[5] On basis of 86,394,575 population for 1908, which is reached by adding to the population of the United States in 1900, 75,994,575 (which excludes Alaska, Hawaii, and persons in the military and naval service stationed abroad), an estimated annual increase of 1,300,000 for each successive year.

In comparing the mileage figures for the year ending June 30, 1908, with corresponding figures for previous years, it is necessary to remember, what has already been explained, that the figures for the year covered by this report do not include the mileage of switching and terminal companies. The total length of single-track mileage on June 30, 1908, as shown in the summary was 233,677.71 miles, which, compared with the corresponding figures for the previous year would show an increase of 3,726.52 miles. The "Increase over June 30, 1907," is arrived at by making the comparison with like figures for 1907; that is to say, by reducing the total for that year by the amount of terminal and switching mileage included therein. The true increase in single-track mileage, then, exclusive of the mileage of switching and terminal roads for both years, was 5,930.18 miles.

The States showing the greatest increase in railway mileage are, California, with an increase of 426.86 miles; Florida, with an increase of 228.35 miles; Indiana, with an increase of 200.71 miles; Louisiana, with an increase of 706.66 miles; Montana, with an increase of 423.20 miles; North Carolina, with an increase of 286.27 miles; North Dakota, with an increase of 272.72 miles; South Dakota, with an increase of 254.63 miles; Texas, with an increase of 333.96 miles, and Washington, with an increase of 401.02 miles. No other States show an increase in excess of 200 miles of line.

The foregoing summary contains two important assignments, namely, the number of miles of line per 100 square miles of territory, and the number of miles of line per 10,000 inhabitants. A comparison

of these assignments for the several States shows very great diversity in railway facilities provided in the different parts of the country. The population for years subsequent to June 30, 1900, made the basis of the assignment of miles of line per 10,000 inhabitants, is, of course, an estimate. These figures will require slight revision when the census of 1910 shall have furnished correct information. The same rule of estimate has been followed since the last census as was followed previously to 1900, a rule which produced results so nearly accurate as to render it unnecessary to modify in any great degree the figures published between 1890 and 1900, when the Twelfth Census made its appearance.

In the next summary will be found a classification of railway mileage owned, by territorial groups.

* Does not include mileage of switching and terminal companies.
[1] Does not include mileage in Alaska and Hawaii.

The next summary differs from the above statements relative to mileage in that the basis of compilation is operated mileage rather than physical mileage. It covers single track, second track, third track, fourth track, and yard track and sidings. It includes duplication of physical mileage in all cases where two or more carriers make use of the same track. Moreover, it does not include mileage for which no reports of revenues and expenses or other significant facts pertaining to operation have been received. The figures here submitted can not be checked against the figures contained in the foregoing summaries. One who understands the extent to which railway property is used jointly by two or more independent operating companies will appreciate the necessity of making separate compilations of physical mileage and operated mileage.

* Does not include mileage reported by switching and terminal companies.

From the above summary it appears that the total mileage operated (all tracks) on June 30, 1908, was 333,645.86 miles, of which 230,494.02 miles were single-track mileage, 20,209.05 miles were second-track mileage, 2,081.16 miles were third-track mileage, 1,408.99 miles were fourth-track mileage, and 79,452.64 miles were yard track and sidings. Reference must again be made to the exclusion of the mileage operated by switching and terminal companies from the totals submitted in this report. A special compilation was made in order to arrive at the correct increase in the items covered by the above summary, with the result that the increase in single-track mileage operated in 1908 over that for 1907 for which reports were rendered to the Commission was shown to be 4,263.83 miles. The corresponding figures for second track were 1,052.37 miles; for third track, 150.88 miles; for fourth track, 46.78 miles; and for yard track and sidings, 3,191.43 miles, which, summarized, show an increase in all tracks for 1908 as compared with 1907 of 8,705.29 miles.

The above summary is an analysis of the single-track operated mileage designed to show the manner in which the mileage included in the report of an operating company has been assembled for purposes of operation. In the organization of railway property for purposes of operation it usually happens that some corporation will be made the center about which other corporations are crystallized through the medium of purchase of securities, of leases, or of operating contracts. The mileage to which corporations of that class have title is included under the caption "Line owned by operating company." The responsibility for the operation of the mileage reported under the other captions lies with the officers of the parent companies. This summary may be regarded as a rough indication of the manner in which properties are brought together for purposes of operation, and of the length of line affected by the various methods of consolidating the mileage of separate corporations into operating systems.

CLASSIFICATION OF RAILWAYS.

The summaries which pertain to organization for purposes of operation are as follows:

1. Classification of Roads according to Organization for Operation.
2. Summary of Changes in List of Railways.
3. Classification of Railways on the Basis of Operated Mileage.

In the following summary will be found a classification of railways according to the conditions of organization under which they were operated.

It is common to classify railways according to the length of operated mileage, and such a classification will be found in the summary next submitted. The basis of this classification is explained in the captions of the summary. It is submitted as an independent statement, and is important as indicating one of the significant elements in the American railway system.

EQUIPMENT.

The thirteen equipment summaries next given show, in the order named, the number and kinds of locomotives and cars in use in the United States, their relation to mileage and traffic carried, their classification according to the type and power of the locomotives and the capacity of the freight cars, and the extent to which locomotives and cars are fitted with train brakes and automatic couplers. With the exception of the summary representing assignment of equipment per 1,000 miles of line, by groups, and the summary representing assignment of equipment to the amount of traffic, by groups, these equip-

ment summaries include the equipment of switching and terminal companies. All the equipment summaries, however, exclude so-called "private cars."

The following is a list of the equipment summaries:

1. Equipment, by Groups—Locomotives.
2. Equipment, by Groups—Cars.
3. Assignment of Equipment per 1,000 miles of Line, by Groups.
4. Assignment of Equipment to Amount of Traffic, by Groups.
5. Condensed Statement of Classification of Locomotives.
6. Detailed Classification of Locomotives:

   - B. Four-Cylinder Compound Locomotives.
   - C. Two-Cylinder Compound Locomotives.
7. Classification of Freight Cars, by Capacity.
8. Total Equipment and Equipment Fitted with Train Brake and Automatic Coupler, 1908 to 1889.
9. Equipment Fitted with Train Brake, by Groups—Locomotives.
10. Equipment Fitted with Train Brake, by Groups—Cars.
11. Equipment Fitted with Automatic Coupler, by Groups—Locomotives.

[1] Decrease.

It will be noticed by reference to the preceding summary relative to locomotives that the total number in service on June 30, 1908, was 57,698, an increase of 2,310 over the previous year. There was an increase of 391 in the number of passenger locomotives, 1,761 in the number of freight locomotives, and 271 in the number of switching locomotives. Unclassified locomotives decreased 113 in number.

An examination of the summary for cars shows that on June 30, 1908, there were 2,244,357 cars in the service of the railways of the United States, an increase of 117,763 as compared with the previous year. Of this number, 109,227 were freight cars. Although the increase in cars for the year covered by this report is nearly 50,000 less than for the preceding year, the figures show, nevertheless, a substantial increase in this class of equipment. It is probable that much of this increase is explained by the filling of contracts entered into before the period of depression set in, and to some extent, at least, by the fact that cars which in more prosperous times would have been discarded, were retained in the records.

In the two summaries next following will be found an assignment by territorial groups of both locomotives and cars to length of line and to amount of traffic. The equipment of switching and terminal companies is excluded from the bases of these assignments.

The number of locomotives per 1,000 miles of line on June 30, 1908, was 246, distributed as follows: In passenger service, 57; in freight service, 146; in switching service, 38, and unclassified, 5. The number of cars per 1,000 miles of line was 9,680, distributed as follows: In passenger service, 196; in freight service, 9,064, and in company's service, 420. In one case only, that of switching locomotives, do the figures in the first of the preceding summaries show a decrease, which is explained by the exclusion of the equipment of carriers classed as switching and terminal companies.

The assignment of equipment to amount of traffic brings into notice certain significant facts and expresses in a vivid manner the effect of business depression upon the railways.

The purpose of the summaries which follow is to show under an appropriate classification of railway equipment the number of the various kinds of locomotives in use, classified with regard to certain physical characteristics, and the number and capacity of freight cars of the several classes. From these summaries the great diversity of railway equipment is apparent.

[4] Includes 2,354 oil-burning locomotives.

The form of the above summary has been changed somewhat from the corresponding summary in previous reports in order to provide for a statement of the total number of locomotives of all classes, together with the corresponding averages. The figures for the year under consideration, taken in connection with corresponding figures for the year ending June 30, 1907, show an increase in the number of single-expansion locomotives from 51,891 to 54,230, while in the case of other types of locomotives there has been a decrease.

The classification of locomotives under three general headings is given in the above summary. The character of this summary is such that it is not practicable to show data covering a series of years. A corresponding analysis, however, will be found in previous annual reports, and from these a comparison may be had to show changes in the number of locomotives of any particular class from year to year.

The next summary submits a classified statement of freight cars according to kind and capacity.

The total figures in the preceding summary, taken in connection with the summary for the previous year, show an increase of 110,217 freight cars. This increase has been mainly in cars of from 40 to 50 tons capacity.

The following series of summaries show the extent to which cars and locomotives of the various classes named are fitted with train brakes and automatic couplers:

* See notes to summaries on pages 41, 47, and 53.

From the foregoing summaries it will be noticed that on June 30, 1908, the operating roads reported 1,436,275 employees on their pay rolls. If to this number be added 21,969 employees reported by switching and terminal companies, the total number of employees reported as in the service of the carriers was 1,458,244. This number, however, does not include a small number of men in administrative positions with lessor companies. A comparison of the foregoing figures with those for the previous year shows a decrease of 213,830, or 12.79 per cent, while the year ending June 30, 1907, showed an increase of 150,719 over the year 1906. An analysis of the decrease shows that fully six-sevenths of the employees dropped from the pay rolls were in one or the other of the seven classes "Other trackmen," "Other shopmen," "All other employees and laborers," "Other station men," "Other trainmen," "Carpenters," and "Machinists." It will be noticed that these classes, with the exception of the last two, are among the lowest paid of railway employees.

In the next summary certain data are presented by territorial groups.

The form of the preceding summary differs from the form used in previous reports in that provision is made for employees whose compensation is covered by "Traffic expenses." This was rendered necessary by the changes in the Classification of Operating Expenses.

The figures showing employees per 100 miles of line, by groups, show, to some extent, the development of railway transportation, and the diversity of conditions under which railways are operated in different parts of the United States.

The next summary gives a comparative statement of the average daily compensation of the various classes during the several years of the last decade. For employees paid upon the basis of piecework, or of other than time units, the averages are not entirely

satisfactory. The problem of a better classification of employees, and of uniform rules for converting piecework to a time basis, is now under consideration.

[1] Does not include compensation paid by Chicago, Milwaukee & St. Paul Ry. Co., not reported. The corresponding amount paid in 1904 was $19,976,412.

The preceding summary shows that for the year ending June 30, 1908, there was reported as paid by the carriers, exclusive of switching and terminal companies, in wages and salaries to their employees, $1,035,437,528. The amount reported to have been paid to the employees of switching and terminal companies was $16,194,697, making the total of wages and salaries paid by the two classes of carriers, $1,051,632,225. These figures do not include the salaries paid to a small number of men for administrative service on account of lessor companies. The amount, however, is not of such importance as noticeably to affect the total of salaries paid.

It may be remarked that during the year under consideration there was a decrease in the amount of compensation paid to employees of more than $20,000,000, as compared with an increase for the previous year of approximately $135,000,000. This decrease is due to the reduction in the number of employees, and reflects the effect of the commercial depression extending over nine months of the year covered by this report. Notwithstanding the decrease in the number of employees and in the total amount of compensation paid, the average of daily compensation for nearly all classes increased, as is shown in the preceding summaries for average daily

compensation. This increase is especially noticeable in the northern and eastern sections of the United States. One factor influencing the average daily compensation is probably found in an effort on the part of the operating officials to economize by dropping from the pay rolls such of the less skilled employees of each class as could be spared.

CAPITALIZATION OF RAILWAY PROPERTY.

1. Summary of Railway Capital for the Years ending June 30, 1907 to 1898—United States.

2. Summary of Railway Capital on June 30, 1908, by Groups.

3. Summary showing Dividend-Paying Stock and Dividends Declared for the Years ending June 30, 1908 to 1888.

4. Statement of Railway Capital by Rate of Dividend or Interest.

5. Summary showing Per Cent of Stock Paying No Dividends.

6. Summary showing Dividends and Interest.

The capitalization for the ten years prior to 1908 is given as a separate statement for the reason that the extension of the classification of funded debt, as also of what is included in the definition of funded-debt liabilities for the current year, prevents a close comparison between the items submitted this year and the corresponding items of previous years. The chief difference in classification is that "Miscellaneous obligations" are analyzed in order to show separately

"Collateral trust bonds" and "Plain bonds, debentures, and notes." Certain notes, also, which in previous reports were reported as "Current liabilities," are now included in funded debt.

As a matter of interest, and as explaining in part the increase in the rate of dividend, there is next inserted a comparative statement for certain roads which during the year covered by this report paid what appear to be exceptional amounts of dividends.

There is next inserted a comparative statement showing the per cent of capital stock paying no dividends for the years ending June 30, 1908 to 1898, inclusive. Similar statements have sometimes been misinterpreted. The relatively large amount of stocks paying no dividends is chiefly due to corporate ownership of this class of securities. It is a feature of the consolidation of railway properties into systems for purpose of operation, and results from the fact that on account of legal obligations it seems wise to keep alive certain classes of stocks which, from the point of view of any claim upon the public for support, might as well be canceled.

There is next given a summary showing dividends and interest for the year ending June 30, 1908. The statement includes separate figures for dividends declared from current income and dividends declared during the year from surplus, and covers both operating and leased lines. As explained on page 84, the total figures in this summary are slightly in excess of corresponding items in the income account and profit and loss account summaries. No attempt is made in the summary under consideration to eliminate duplications resulting from intercorporate payments, the extent of such duplications being indicated in the summary on page 83.

* The figures in this summary are slightly in excess of corresponding figures in the Income Accounts and Profit and Loss Accounts, pages 84 and 93. Data for switching and terminal companies are not included.

Reference has been made in previous reports to the fact that large amounts of railway securities, both stocks and bonds, are held by railway corporations in their corporate capacity, and to the extent of such holdings the amount in the hands of the public is not as great as the aggregate issues. It is, of course, the amount in the hands of the public which calls for support in dividend and interest payments out of net operating revenue, and for that reason its determination comes to be a matter of considerable importance to one who regards the railways of the United States as a unified system.

From the explanation which follows one may learn the manner in which deductions have been made in order to arrive at the amount of railway securities actually in the hands of the public. It appears that out of the aggregate amount of $16,767,544,827 of railway securities which are reported by carriers, only $12,833,591,510 was outstanding in the hands of the public on June 30, 1908. This is

equivalent to an outstanding capitalization of $57,201 per mile of line. This assignment, it should be understood, is made on the basis of physical mileage, and not of operated mileage.

The amount of railway securities reported as owned by railway corporations was $5,432,472,029, but in this amount are included securities of inactive railway corporations, $1,071,132,812, which are not included in the sixteen billions of outstanding capital, and for this reason should be deducted from the amount of securities reported as owned in the process of arriving at the amount outstanding in the hands of the public. The definition of an inactive corporation is as follows: "An inactive railway corporation is one which has been practically absorbed in the controlling corporation, and which neither operates railway property nor maintains an organization for financial purposes." From securities reported as owned, deduction is also made of the securities of "active railways" for which no reports were filed for the year 1908, $555,816,528, and of the securities of switching and terminal companies not included in the sixteen billions of securities reported as outstanding, $77,863,309. Covered in the sixteen billions will be found securities which represent properties owned and operated by railway corporations but not used in rendering the service of transportation—as, for example, coal-mine properties, lumbering properties, and the like. The amount deducted from the total amount outstanding for this class of properties is $206,293,937, making the total amount to be deducted from the aggregate amount of railway capital reported as outstanding, $3,933,953,317. The error in the above statement pertains to the amount assigned to "other properties," for it has not been possible to secure a satisfactory assignment of securities issued by railway companies for other than railway purposes. The only way of arriving at the full amount, properly assignable to "other properties," would be by means of an inventory valuation of all the property listed in the property accounts of reporting companies.

Every operating officer, as well as every student of railway economics, makes use of operating, traffic, and financial statements, as also of averages and assignments, for the purpose of testing the degree of economy and efficiency attained in the administration of the properties. The summaries here brought together have nothing in common except that they cover, so far as they go, the kind of information which is commonly used for this purpose. The averages and assignments may be accepted as normal or typical units of operation with which corresponding units for individual roads may be compared. The large amount of mileage covered by these statements warrants their acceptance as comprehensively representing the results of the operation of railways in the United States.

The summary first submitted shows the public service rendered by railways for the year ending June 30, 1908.

[1] Figures include an apportionment of unclassified tonnage; see page 76, note 1.

[2] The figures shown for 1908 are not fully comparable with those given for previous years, chiefly for the reason that they do not include returns for switching and terminal companies.

[3] Includes an estimate for certain roads, as their records for this item were destroyed in the San Francisco fire of April, 1906.

The number of passengers carried earning revenue during the year covered by the report was 890,009,574. The corresponding number for the year ending June 30, 1907 (exclusive of the relatively small number of passengers reported as carried by switching and terminal companies for that year), was 867,169,311, from which it will be seen that the actual increase in the number of passengers carried during the year ending June 30, 1908, over that for 1907 was 22,840,263. The increase in the number of passengers carried during the year 1907 over that for 1906 was 75,959,017. The number of passengers carried 1 mile for 1908 was 29,082,836,944. As the corresponding figure for 1907, exclusive of returns for switching and terminal companies, was 27,682,738,932, the increase in the number of passengers carried 1 mile for 1908 over the corresponding figures for 1907 was 1,400,098,012 passenger-miles. The increase in the number of passengers carried 1 mile in 1907 over 1906 was 2,551,313,199 passenger-miles. The twelve months ending June 30, 1908, include what is known as the nine months of depressed traffic.

The number of tons of freight shown as carried (including freight received from connections), as compiled for the year ending June 30, 1908, was 1,532,981,790, while the corresponding figure for the year ending June 30, 1907, exclusive of tonnage reported as carried by switching and terminal companies for that year, was 1,718,442,600, from which it appears that the decrease in the number of tons carried in 1908 under the corresponding figure for 1907 was 185,460,810. The increase in the number of tons carried in 1907 over the corresponding return for 1906 was 164,962,440 tons. The ton-mileage, or the number of tons carried 1 mile, as shown for the year ending June 30, 1908, was 218,381,554,802. Excluding the returns of switching and terminal companies, the total ton-mileage as reported for the year ending June 30, 1907, was 236,534,974,172, from which it will be seen that the decrease in the ton-mileage for the year ending June 30, 1908, under the return for 1907 was 18,153,419,370 ton-miles, which at the average rate of 0.754 cent per ton-mile shows a shrinkage in freight revenue of $136,876,782. The increase in the number of tons carried 1 mile in 1907 over that for 1906 was 20,723,838,862 ton-miles.

The preceding summary shows the increase in passenger and freight traffic for the country at large since 1898. It also presents the figures for 1908 by territorial groups.

[1] The averages shown for 1908 are not fully comparable with those for previous years, chiefly for the reason that the figures upon which they are based do not include returns for switching and terminal companies.

The above summary presents a series of typical transportation units, both for the United States and for various territorial groups.

The average receipts per passenger per mile for the year covered by the above statement were 1.937 cents. To what extent this drop from 2.014 cents in 1907 can be attributed to the legislative reductions in passenger rates can not, of course, be determined. It is interesting to note, however, that the average receipts per passenger per mile for the fiscal years 1898, 1899, 1902, and 1905 were below 2 cents. The average receipts per ton per mile were 0.754 cent. The corresponding average for 1898 was 0.753 cent. A glance at the figures for the eleven years covered by the comparative statement seems to warrant the conclusion that freight rates have reached a point of at least relative stability. It may be doubted, however, whether this unit is a satistory unit for testing the tendency in freight rates for the reason that it is influenced quite as much by the proportionate amounts of freight carried of the various classes as by changes in the tariff schedules.

The average haul of freight is given in two ways; namely, the typical haul of the average railway and the typical haul of all the railways regarded as a system. The former shows the average haul per ton as 143.83 miles, and the latter as 253.94 miles. It is this latter figure which should be accepted, should one desire to include the average haul per ton among the considerations bearing upon the reasonableness of a rate. It is arrived at by dividing the aggregate ton-mileage of the year by the number of tons reported as originating on the line of the reporting carriers; that is to say, the number of tons reported by all carriers exclusive of duplications.

In the next summary will be found an assignment of certain selected items on a train-mileage basis.

[1] The averages shown for 1908 are not fully comparable with those for previous years, chiefly for the reason that the figures upon which they are based do not include returns for switching and terminal companies.

[2] The train mileage used in computing this average represents the sum of revenue passenger train-miles and 25 per cent of revenue mixed train-miles. Beginning with 1900, the total of revenue mixed train-miles has been included in the basis.

[3] The train mileage used in computing this average represents the sum of revenue freight train-miles and 75 per cent of revenue mixed train-miles. Beginning with 1900, the total of revenue mixed train-miles has been included in the basis.

A comparison of any of the items submitted in the above summary for the ten years ending June 30, 1908, makes clear the tendency in railway economies during those years. The figures are passed without comment for the reason that the industrial and commercial character of each year covered by the statement should be known before it can be possible to arrive at a trustworthy interpretation of the facts submitted. It is, for example, a fact suggestive of serious financial embarrassment that the operating revenues per train-mile for 1908 should be less than for 1907 while the operating expenses per train-mile are slightly greater. While revenues quickly respond to changes in commercial conditions, operating expenses respond but sluggishly to the efforts of the management to bring them under control. The lesson suggested by such a comparison is that every safely administered railroad should recognize the difficulty of bringing operating expenses under control, and in times of prosperity provide against the contingency of reduced traffic.

In the next summary will be found an assignment of certain selected items per mile of road, as also the ratio of operating expenses to operating revenues.

An attempt is made in the next summary to indicate in a rough way the parts of the country in which the commodities named take their origin. The territorial divisions correspond, for the most part, to the territory covered respectively by the "Official Classification," the "Southern Classification," and the "Western Classification." A comparison of the ratios which the several classes of commodities bear to the total tonnage in the several divisions is interesting and instructive. The amount of tonnage distributed in this table is about 90 per cent of the total tonnage originating on road, as shown in the summary on page 70.

The form for annual report from carriers calls for a statement of tonnage, ton mileage, and revenue for certain selected commodities, and it is instructive to notice the results of the compilation for these commodities in connection with the corresponding compilation for all commodities. This compilation, which is confined to freight moved in carload lots, is submitted in the following statement.

SUMMARY OF SELECTED COMMODITIES FOR THE YEAR ENDING JUNE 30, 1908.

[Mileage represented on June 30, 1908—100,921.22 miles.]

The next summaries show a classified statement of locomotive mileage according to the character of the service, a classified statement of train mileage, and a classified statement of car mileage. The facts submitted in these summaries are published for the first time in this report, with the exception of a few statements relative to car mileage and train mileage. They are compiled from reports made in conformity with the rules relative to locomotive, car, and train miles promulgated by the Commission. This class of information will prove to be of increasing importance from year to year.

INCOME AND PROFIT AND LOSS STATEMENT.

1. Income Account of the Railways in the United States, Considered as a System, for the Year ending June 30, 1908.

2. Condensed Income Account and Profit and Loss Account of Operating Roads.

3. Analysis of Operating Revenues.

4. Analysis of Operating Expenses.

5. Analysis of Income of Operating Roads other than Operating Income.

6. Analysis of Deductions from Gross Corporate Income of Operating Roads.

7. Classification of Operating Expenses—A. Large Roads.

8. Classification of Operating Expenses—B. Small Roads.

9. Condensed Income Account and Profit and Loss Account of Leased Roads.

10. Analysis of Income of Leased Roads other than Income from Lease.

11. Analysis of Deductions from Gross Corporate Income of Leased Roads.

The income account covers all debit and credit entries necessary to ascertain the surplus or deficit resulting from the administration of a property for a definite period of time. The year is the unit of time usually accepted for such statements. The accounting system pro-

mulgated by the Commission recognizes a distinction between the income account proper and the profit and loss account, which latter account covers debit and credit entries not connected with the year's transactions, and, therefore, properly borne by the accumulated surplus rather than by the surplus resulting from the operations of the year preceding the date on which the accounts are closed.

In certain subsequent summaries, however, the income account statement and the profit and loss statement are brought together in a single statement, as in Table III in the body of this report, the reason being that some roads declare dividends out of current income while others follow the practice of declaring dividends out of accumulated surplus—though uniformity of practice in this respect is not always observed. If dividends are declared out of current income, they are properly entered in the income statement. If, however, they are declared out of accumulated surplus, they are properly entered in the profit and loss account. In order to bring the dividend transactions of a year before the eye in a single statement, the profit and loss statement is submitted immediately following the income statement.

The summaries here submitted also follow Table III in the body of the report in that the income account and profit and loss account statements for operating roads are given separately from the corresponding statements for leased roads. The accounts of the former include both operating and financial transactions, while the accounts of the latter are confined for the most part to moneys received and paid under contracts and agreements. In such items as dividends and taxes both statements must be taken into consideration in order to learn the aggregate of these payments sustained by the railways of the United States.

The separation of the income account and profit and loss account statements for operating and leased lines eliminates a certain number of the difficulties which arise in this compilation on account of intercorporate payments. It does not, however, fully meet the requirements of an income statement for the railways of the United States considered as a system—that is to say, a statement of final balances such as would result were all the railways of the country under a single management, or, to express the matter in another way, a statement which would show the true surplus or deficit resulting from the transactions of the year of all the roads of the country. The summary immediately following is designed to meet this requirement. The statement stands by itself. It is not involved in the more extended analyses of totals found in the other summaries.

INCOME ACCOUNT OF THE RAILWAYS IN THE UNITED STATES, CONSIDERED AS A SYSTEM, FOR THE YEAR ENDING JUNE 30, 1908.*

Operating revenues	$2,393,805,989	
Clear income from investments	64,015,142	
Operating revenues and income		$2,457,821,131
Operating expenses	1,669,547,876	
Salaries and maintenance of leased lines	390,841	
Total		1,669,938,717
Net revenue and income		787,882,414
Net interest on funded debt	343,516,671	
Other interest	31,337,323	
Taxes	84,555,146	
Total		459,409,140
Available for dividends, adjustments, and improvements		328,473,274
Net dividends		[1]227,597,070
Available for adjustments and improvements		[2]100,876,204

* Excludes returns for switching and terminal companies and for a few roads the reports of which were not sufficiently complete for use in this summary.

[1] This amount is obtained by deducting from total dividends declared ($390,456,434), which includes dividends declared from current income ($305,172,030) and dividends declared out of surplus ($85,284,404), the dividends receivable by railways from railway stock owned or controlled ($162,859,364).

[2] This amount comprises the following items: Additions and betterments charged to income, $29,174,456; advances to cover deficits in operation of weak lines (estimated), $5,000,000; miscellaneous deductions, $64,239,485, and surplus, $2,462,263.

Before submitting the other income and profit and loss account summaries, a word of explanation may be found useful. The plan of presentation is simple, and is as follows: There is first inserted a condensed income account and profit and loss account of operating roads. From this statement may be learned the surplus resulting from the year's transactions, and also the credit balance carried forward to the balance sheet. Following this condensed statement will be found summaries the purpose of which is to analyze the significant figures which appear in the condensed statement. The titles selected for this analysis are operating revenues, operating expenses, income of operating roads other than operating income, and deductions from gross corporate income of operating roads. To these are added the special classifications of operating expenses for large roads and for small roads. There is next inserted a condensed income account and profit and loss account of leased roads, followed by an analysis of the income of leased roads other than income from lease and an analysis of deductions from gross corporate income of leased roads. Provided one hold in mind the structure of these summaries, he may easily find such items as for any reason are of peculiar interest.

[1] Allows for a "Net deficit" of $1,660, gross revenues and expenses not being reported.

In view of what has already been said, the above summary is for the most part self-explanatory. Operating revenues for the year covered by this report are given as $2,393,805,989. Should one compare this figure with the corresponding figures given in Table III in the body of the report, a difference of $974,421 will be found between the two statements. The explanation of this difference is that the amount given in Table III is the aggregate of operating expenses reported by all carriers, regardless of whether or not the reports were sufficiently complete to enable the construction of a satisfactory income account. The above summary, on the other hand, excludes credit items unless satisfactory debit items are furnished, and

excludes both debit and credit items reported, unless classified in such a manner as to enable a complete classification of all entries. When, however, it is recognized that the amount excluded from operating revenues in the above summary is considerably less than 1 per cent of the total of operating revenues reported in Table III, it will be readily conceded that the differences referred to are negligible so far as any practical use made of the consolidated figures is concerned. In the table the facts will be found as reported by each carrier.

Previous reports have included the revenues and expenses of outside operations in the general rail statement. By outside operations are meant operations which are undertaken by the carriers, but which are not directly incident to transportation by rail, the inclusion of which with railway transactions would impair the accuracy of statistical exhibits. The amounts involved, as shown from the above summary, are considerable.

The place of taxes in the income account statements comes immediately after the declaration of the net revenue from operations. The amount of this payment is in no way under the control of the carrier, and for that reason is deducted before arriving at the figure which represents the amount transferred to the corporation for the satisfaction of its contracts, for the payment of interest on its obligations, or for other corporate purposes. It should be distinctly understood that the location of taxes in the income account statement does not mean that taxes are classified as operating expenses.

For the operating roads covered by the above statement the net corporate income for the year ending June 30, 1908, was $395,902,474. This is the amount resulting from the operations of the year placed at the disposal of boards of directors for the payment of dividends and other corporation expenditures. During the year covered by the report there was appropriated out of this net corporate income $271,328,453 in dividends, $28,086,454 for additions and betterments to the property, and $21,635,182 as appropriations to reserves and miscellaneous items, leaving a balance carried forward to the credit of profit and loss of $74,852,385. At this point, however, a word of caution is necessary. In addition to the dividends declared from current income, dividends to the amount of $57,733,808 were declared out of the surplus accumulated from past years, making a total for dividends declared by operating companies of $329,062,261. It is not known what motive carriers may have for declaring dividends out of surplus rather than out of current income, but it is evident that to the extent of the dividends declared out of accumulated surplus the balance carried forward to profit and loss is overstated, if that amount is accepted as the measurement of the increase in the undivided surplus resulting from the year's operations. The profit and loss adjustments are self-explanatory.

The changes in the income account submitted in the present report are so far-reaching in their results as to impair direct and close comparison with the corresponding statements contained in previous reports. The main figures are, of course, comparable. There will be found in Appendix D, page 201, following the text of this report, reprints from previous reports inserted for the convenience of those who may care to know what the corresponding figures were for previous years. The differences in the classifications and the analyses must be held in mind should one desire to make use of the figures there submitted.

The remaining summaries pertaining to the income account and profit and loss account statements are inserted without comment.

GENERAL BALANCE SHEET.

No particular emphasis has ever been laid on the general balance sheet statements contained in the statistical reports of previous years, nor is it possible at this time to recommend the consolidated figures as worthy of claim to serious consideration. This does not mean that the individual balance sheets which individual carriers publish from year to year have no meaning for the purpose for which such balance sheets are drawn, but rather that the principles underlying such statements are so various and the classifications adopted so different that it is impossible to convey any very trustworthy intelligence from a consolidation of the balance sheets as rendered. On June 21, 1909, the Commission promulgated by special order a new form of balance sheet, and it is expected that this statement in future reports will carry with it the authority which its importance demands. The balance sheet is the key to all accounts. Its profit and loss statement (taken in connection with appropriated surplus) may be accepted as a measure of the financial result of railway operations and transactions during past years. It is confidently expected that the order of the Commission above referred to will enable the compilation of a satisfactory balance sheet. Meantime, there is inserted in this report a balance-sheet statement compiled according to the practice of previous years. The figures submitted do not include the assets and liabilities of terminal and switching properties.

TAXES.

The next summary shows the amount of taxes assessed as applying to the railways in the United States during the year ending June 30, 1908, other than those classed as switching and terminal. These taxes are classed according to the States in which they are assessed, and include assessments on account of minor civil divisions as well as of state governments.

* Does not include taxes reported by carriers classed as switching and terminal, amounting to $1,807,940, which includes $1,893 paid in the Dominion of Canada, and $36,000 not localized by States and Territories.

[1] Excludes $78,773 paid in the Dominion of Canada, $1,325 not localized by States and Territories, and $23,897, chiefly overestimates of taxes; but includes $67,568, chiefly underestimates of taxes, leaving a net difference of $36,427 between this total and the sum of taxes shown in Table III-A and Table III-B.

The amount of taxes shown in the foregoing summary for the year ending June 30, 1908, is given as $84,563,565, averaging $382 per mile of line. The total amount of taxes, localized by States and Territories, reported for all railways, including those returned by carriers classed as switching and terminal to the amount of $1,770,047, was $86,333,612.

In the next summary is found an analysis of taxes by States and Territories, showing the basis upon which they were assessed.

The following summaries have been prepared from the annual reports of carriers to the Interstate Commerce Commission. The figures vary slightly from those contained in the quarterly accident bulletins published by the Commission for reasons that may be easily explained. In the first summary will be found a statement of the number of employees, passengers, and other persons killed or injured for the years 1908 to 1888, inclusive.

* Does not include accidents reported by carriers classed as switching and terminal as follows: Employees killed 65, injured 880; passengers killed 2, injured 36; other persons killed 58, injured 88: total number killed 125, injured 1,004.

The foregoing summary shows that during the year covered by this report the railways of the United States, including carriers classed as switching and terminal companies, for which data are returned in the accompanying footnote, reported as killed in connection with

the operations of railways 10,313 persons, and as injured, 105,234 persons. These figures show a decrease of 1,526 in the number killed and of 5,782 in the number injured when comparison is made with the corresponding returns for 1907, a decrease of 12.89 per cent in the number killed and of 5.21 per cent in the number injured. A comparison of the corresponding figures of 1907 with those of 1906 shows an increase for 1907 of 1,221 in the number killed and of 13,310 in the number injured.

An analysis of the figures for the year under consideration shows that of the number killed, 3,470 were employees, 383 passengers, and 6,460 persons other than employees and passengers, showing a decrease of 1,064 in the number of employees killed, 227 in the number of passengers killed, and 235 in the number of persons killed other than passengers and employees. Of the persons injured, 83,367 were employees, 11,592 passengers, and 10,275 persons other than employees and passengers. These figures show a decrease of 4,277 employees, 1,449 passengers, and 56 other persons injured. In the following summaries these figures, exclusive of the data pertaining to switching and terminal companies, are subjected to an analysis for the purpose of showing classes and casualties responsible for the deaths and injuries sustained, and also what classes of employees are especially exposed to the kinds of accidents named.

The preceding summary makes a separation of accidents due to the movement of trains from those arising from other causes. Referring to the first of these classes—accidents due to the movement of trains, locomotives, or cars—it will be noticed that the total number of employees reported killed from this cause during the year covered by this report was 3,135, and the total number injured, 43,927. These figures (which exclude the relatively small number of accidents reported by switching and terminal companies) show a considerable decrease for this year from the preceding year in the number killed and injured, whereas a comparison of the figures for 1907 with those for 1906 shows increases for 1907 both in the number killed and in the number injured. Part of this decrease in the number of employees killed and injured may be accounted for by the decrease in the number of men in the employ of the railways during the year and by the fact that the relatively less competent men were dropped from the rolls, thus raising the general average of efficiency among the employees whose services were retained.

The abandonment of improvement work, also, rendered the operation of trains more safe, nor should the decrease in overtime work be disregarded.

Of the employees killed or injured, the trainmen sustained the greater number of casualties, as will be seen from the fact that out of a total of 3,135 employees killed and 43,927 injured, 1,842 killed and 35,821 injured were trainmen. These figures, however, show a decrease from those of the previous year, for both killed and injured. The most fruitful causes of fatalities and injuries are indicated by the large number of casualties resulting from falling from trains, locomotives, or cars, and from being struck by trains, locomotives, or cars. Collisions and derailments are also the occasion of many casualties. When, however, all classes of employees are taken into account it will be noticed that nearly two-fifths of the fatalities are due to being struck by trains, locomotives, or cars.

There is also a noticeable decrease in the number of passengers killed during the present year. The returns for the previous year show 594 fatalities to passengers, as compared with 378 for the present year. The greater number of these deaths may be assigned in about equal proportions to collisions and jumping on or off trains. Comparison of the returns for passengers injured during the year with the previous year will show a decrease of 1,572. This decrease is emphasized by the fact that the number of passengers reported as carried for this year is considerably greater than for the previous year.

Of persons killed and injured other than passengers and employees, it may be of interest to notice that out of a total of 6,338 killed and 9,708 injured, 5,489 killed and 5,756 injured were trespassing at the time of accident.

APPENDIX A.

CLASSIFICATION OF SWITCHING AND TERMINAL COMPANIES AND MILEAGE FOR THE YEAR ENDING JUNE 30, 1908.

EXPLANATORY NOTE.

The following tabular statement gives certain facts pertaining to the class of carriers designated as switching and terminal companies; or, in brief, companies the revenue of which is mainly or wholly derived from switching service or from the furnishing of terminal trackage or other terminal facilities, such as union passenger stations, freight stations, stock yards, etc. Bridge and ferry companies are also included in the general class.

Returns for switching and terminal companies, as a general statement, with exceptions elsewhere noted, are not embodied in this report.

APPENDIX B.

COMPARATIVE SCHEDULE OF OPERATING EXPENSE ACCOUNTS FOR LARGE ROADS AND FOR SMALL ROADS.

EXPLANATORY NOTE.

The comparative schedule presented for the year ending June 30, 1908, shows how the primary accounts included in the Classification of Operating Expenses, Third Revised Issue, prescribed by the Interstate Commerce Commission for the use of steam roads, and followed by so-called "Large Roads," were arranged for the primary accounts of "Small Roads," in anticipation of the Classification of Operating Expenses, Third Revised Issue, *Condensed*, effective on July 1, 1908—the five general accounts being alike for both classes of roads.

APPENDIX C.

CLASSIFICATION OF OPERATING EXPENSES OF SYSTEMS OR ROADS OPERATING MORE THAN 500 MILES OF LINE ON JUNE 30, 1908.

EXPLANATORY NOTE.

Preceding the classification of operating expenses of the systems or roads embodied in this Appendix C is a System Index and Mileage Table which gives the names of the carriers that are grouped into the several systems with their respective average mileages. As the designations of the so-called "Systems," as used in this appendix, are chosen largely for convenient identification, they should not be accepted as corporate titles.

The bases for the grouping of roads into systems were, briefly, statements relative to leases or contracts and to investments in securities the purpose of which is to perpetuate control. The components of the systems are, with minor differences, like those given in the Bulletins of Revenues and Expenses of Steam Roads covering the fiscal year ending June 30, 1909, compiled from the monthly reports of the revenues and expenses of such carriers. As changes in the corporate control of railway property are of frequent occurrence, the grouping of roads into systems may be slightly imperfect.

Credit entries are indicated throughout this appendix by the use of italic figures.

APPENDIX D.

CERTAIN STATISTICAL SUMMARIES PERTAINING TO FISCAL YEARS PRIOR TO 1908.

EXPLANATORY NOTE.

In Appendix D there are inserted for the purpose of convenient reference a few statistical summaries substantially repeated from the Twentieth Annual Report on the Statistics of Railways in the United States for the year ending June 30, 1907, as these summaries contain some figures for the United States that may be desired for approximate comparisons. The summaries are separately given here for the reason, chiefly, that changes in the accounting classifications governing returns for the year ending June 30, 1908, and the separation of returns for switching and terminal companies render an exact comparison of returns for 1908 with those for previous years impracticable in many cases.

APPENDIX D.

TABLE I.

CLASSIFICATION OF RAILWAYS AND MILEAGE

FOR

THE YEAR ENDING JUNE 30, 1908.

EXPLANATORY NOTE.

The established custom of tabulating statistics by territorial groups is continued in this report. "Supplement A," pages 336 and 337, contains totalized figures for certain roads lying in more than one group.

In this table the names of all independent operating roads appear in alphabetical order, printed flush, while those of subsidiary roads, making either operating or financial reports, are indented, being alphabetically arranged also. The names of such subsidiary roads as operated their own mileage and possibly that of other roads under the control of the leading road of a system are so arranged, however, after a preceding alphabetical arrangement of the subsidiary roads, the operations of which are included in the report of the leading road. For illustrations, see pages 234 to 238, Nos. 394 to 464, both inclusive. A subsidiary road may have in a subsidiary relation to itself another road, which will appear indented to the second place, and, if some other road be subsidiary to the latter, this third road will be still further indented. For illustration, see page 234, No. 394, Pennsylvania Railroad Company, which appears printed flush as the principal road in an operating system, and under it, as subsidiary, on page 238, No. 454, the Philadelphia, Baltimore and Washington Railroad Company, "indented." On page 238, No. 460, the Philadelphia and Baltimore Central Railroad Company, is subsidiary to the last-named company, and "indented to the second place," and this road has subsidiary to itself No. 461, the Chester Creek Railroad Company, which is "still further indented." This arrangement shows the proper relation of any road to the immediate road or roads preceding, and this plan has been followed throughout all tables of the report. The form of relation existing between the subsidiary companies and the companies by which they are controlled is stated in column 6 of this table. In the subsequent tables the roads have abbreviated names, but the same numbers as in Table I. In "Supplement B," pages 338 to 345, inclusive, however, the numbers of roads given are those of the same roads as used in the Twentieth Annual Report, these roads having, for the most part, ceased to have a recognized corporate existence during the year covered by this report, and therefore not appearing in Table I proper. The names of certain roads included in "Supplement B" appear with the same "No." printed in bold-faced type, in Table II and tables following, for the purpose of showing their statistics to the date of the corporate change within the year.

It should be noted that from Table I of the present report there have been omitted returns for switching and terminal companies, with regard to which see various references in the Text and also in Appendix A.

TABLE II.

AMOUNT OF RAILWAY CAPITAL

AT THE

CLOSE OF THE YEAR ENDING JUNE 30, 1908.

EXPLANATORY NOTE.

The statistics in this table were compiled on the basis of territorial grouping. With a few exceptions that are explained in footnotes, the roads appearing in this table are such as filed annual reports in time for use in all tabulations. The "Supplement," pages 420 to 425, inclusive, contains totalized figures for certain roads lying in more than one group. The group data for such roads were, as a rule, assigned by the Bureau of Statistics and Accounts on the basis of the group location of "Line owned," except as otherwise indicated by footnotes.

As explained in the Text, this table does not embrace returns of switching and terminal companies.

TABLE III.

CONDENSED INCOME ACCOUNT AND DISPOSITION OF NET CORPORATE INCOME

FOR

THE YEAR ENDING JUNE 30, 1908.

A.—OPERATING ROADS.

EXPLANATORY NOTE.

The amounts in the recapitulation at the beginning of this table represent the column totals of all the entries as they are stated by roads; but, because of deficient returns in the case of a few roads, the indicated combination of items given for the United States, or for the so-called groups, as well as for the roads in question, would respectively show existing discrepancies. Reference is therefore made here to the proper summaries in the Text of the report (see pages 81 to 92), from which the deficient returns causing the differences noted are excluded.

The statistics in this table were compiled on the basis of territorial grouping. The roads appearing in this table are, with a few exceptions that are explained by footnotes, such as filed operating reports in season for use in all tabulations. The "Supplement," pages 538 to 545, inclusive, contains totalized figures for certain roads lying in more than one group. The group data in this table for some of these roads were assigned by the Bureau of Statistics and Accounts, as indicated by footnotes.

As explained in the Text, this table does not embrace returns of switching and terminal companies.

TABLE III.

CONDENSED INCOME ACCOUNT AND DISPOSITION OF NET CORPORATE INCOME

FOR

THE YEAR ENDING JUNE 30, 1908.

B.—LEASED ROADS.

EXPLANATORY NOTE.

The amounts in the recapitulation at the beginning of this table represent the column totals of all the entries as they are stated by roads; but, because of deficient returns in the case of a few roads, the indicated combination of items given for the United States, or for the so-called groups, as well as for the roads in question, would respectively show existing discrepancies. Reference is, therefore, made here to the proper summaries in the Text of the report (see pages 93 and 94), from which the deficient returns causing the differences noted are excluded.

The statistics in this table were compiled on the basis of territorial grouping. With a few exceptions, that are explained by footnotes, the roads appearing in this table are such as filed annual reports in season for use in all tabulations. The "Supplement," pages 586 and 587, contains totalized figures for certain roads lying in more than one group. The group data in this table for some of these roads were assigned by the Bureau of Statistics and Accounts, as indicated by footnotes.

As explained in the Text, this table does not embrace returns of switching and terminal companies.

TABLE IV.

ANALYSIS OF OPERATING REVENUES

FOR

THE YEAR ENDING JUNE 30, 1908.

EXPLANATORY NOTE.

The statistics in this table were compiled on the basis of territorial grouping. With a few exceptions that are explained by footnotes, the roads appearing in this table are such as filed operating reports in season for use in all tabulations. The "Supplement," pages 642 to 645, inclusive, contains totalized figures for certain roads lying in more than one territorial group. The group data in this table for some of these roads were assigned by the Bureau of Statistics and Accounts, as indicated by footnotes.

As explained in the Text, this table does not embrace returns of switching and terminal companies.

TABLE V.

ANALYSIS OF OPERATING EXPENSES

FOR

THE YEAR ENDING JUNE 30, 1908.

EXPLANATORY NOTE.

The statistics contained in this table were compiled on the basis of territorial grouping. The roads appearing in this table are, with a few exceptions that are explained by footnotes, such as filed operating reports in season for use in all tabulations. The "Supplement," pages 674 and 675, contains totalized figures for certain roads lying in more than one group. The group data in this table for some of these roads were assigned by the Bureau of Statistics and Accounts, as indicated by footnotes.

As explained in the Text, this table does not embrace returns of switching and terminal companies.

TABLE VI.

ANALYSIS OF INCOME

FOR

THE YEAR ENDING JUNE 30, 1908.

EXPLANATORY NOTE.

In this table the names of so-called leased roads, or roads operated by lessee companies, in accordance with leases, contracts, or other agreements, are printed in italic in order that leased roads may be conveniently distinguished from the class of carriers designated as operating roads.

The statistics contained in this table were compiled on the basis of territorial grouping. The roads appearing in this table are, with a few exceptions that are explained by footnotes, such as filed annual reports in season for use in all tabulations. The "Supplement," pages 746 to 749, inclusive, contains totalized figures for certain roads lying in more than one territorial group. For some of these roads data were assigned to territorial groups by the Bureau of Statistics and Accounts, as indicated by footnotes.

As explained in the Text, this table does not embrace returns of switching and terminal companies.

TABLE VII.

ANALYSIS OF DEDUCTIONS FROM GROSS CORPORATE INCOME

FOR

THE YEAR ENDING JUNE 30, 1908.

EXPLANATORY NOTE.

In this table the names of so-called leased roads, or roads operated by lessee companies, in accordance with leases, contracts, or other agreements, are printed in italic in order that leased roads may be conveniently distinguished from the class of carriers designated as operating roads.

The statistics in this table were compiled on the basis of territorial grouping. With a few exceptions that are explained by footnotes, the roads appearing in this table are such as filed annual reports in season for use in all tabulations. The "Supplement," pages 814 to 817, inclusive, contains totalized figures for certain roads lying in more than one territorial group. The group data in this table for some of these roads were assigned to groups by the Bureau of Statistics and Accounts, as indicated by footnotes.

As explained in the Text, this table does not embrace returns of switching and terminal companies.

TABLE IX.

GENERAL BALANCE SHEET

FOR

THE YEAR ENDING JUNE 30, 1908.

[Showing Increase or Decrease as compared with June 30, 1907.]

EXPLANATORY NOTE.

The statistics presented in Table IX were not compiled on the basis of the territorial grouping followed in the preceding tables. The roads appearing in this table are, with a few exceptions that are explained by footnotes, such as filed annual reports in season for use in all tabulations.

There is an occasional excess of funded debt in this table over similar data presented in Table II, because of the fact that duplications sometimes arise in the case of subsidiary roads whose "Funded debt" has been assumed by the operating company. The general balance sheets of such subsidiary roads have been included in this table for completeness.

As explained in the Text, this table does not embrace returns of switching and terminal companies.

INDEXES.

EXPLANATORY NOTE.

It will be observed in the "Index to Railways" that following the name of each railway company there are Roman and Arabic numerals in parentheses, which refer respectively to the numbers of groups and to the names of railway companies as used in Table I and in all succeeding tables in this report, thus furnishing a convenient means of locating returns for any railway company on the given page, with the exception that in "Supplement B—Corporate Changes, etc., for the Year" of Table I, pages 338 to 345, inclusive, the numbers used apply only to the names therein. Some of the names appearing in this supplement appear also in Table II and following tables, with the same number printed in bold-faced type, for the purpose of presenting statistics of the companies concerned to the date of a corporate change within the year.

As a further guide to the localization of data, there follows for each table a list of the principal items included therein, together with the first and the last page reference to them.
